

Reactjs program:-

- 1) Create a user signup page with Name,Password, Email,PhoneNo, Profession(Dropdown) and store data in locally(local storage).
- 2) Create a login page and use the previously registered credential to login. Do Name and password check. If Name and password matched then moved to next screen else show “invalid credentials ” message to user
- 3) On successful login, open new page and Call below api and present the data

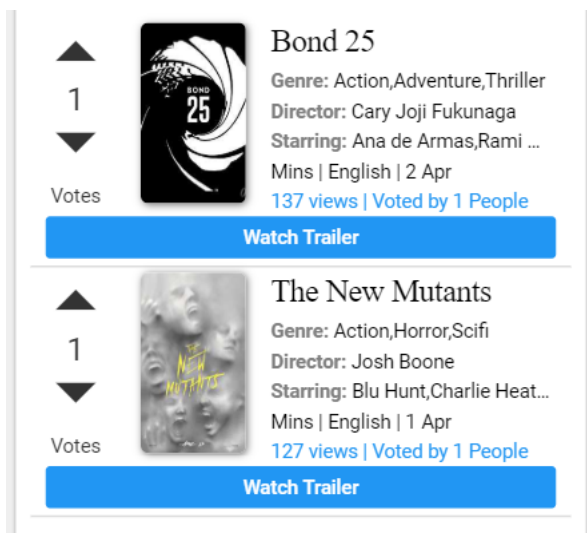

API :

URL: <https://hoblist.com/movieList>

Type: POST

Parameter: category: "movies",
 language: "kannada",
 genre: "all",
 sort: "voting"

Follow this pattern:

- 4) Add one option in menu bar, called Company Info and show bellow details when click on that option
